Information on oil, gas and dual-fuel burners

WM 30 for oil, gas and dual-fuel

WM 30 monarch® burners (350 – 6200 kW) • powerful and versatile

Progress and tradition: The latest monarch® burner

The monarch® trademark has stood for power and quality for more than 50 years

For more than five decades, Weishaupt's monarch® series burners have been used on a wide variety of heat exchangers and industrial plant, and their success has helped underpin Weishaupt's outstanding reputation.

The latest monarch® series is writing the next chapter in this success story. Its combination of ultra-modern technology and compact construction helps to make this burner universally employable.

Digital.

Digital combustion management for economical and reliable burner operation. The controls are easy to use.

Compact.

The aerodynamic housing and special air feed enable a higher capacity within smaller dimensions.

Quiet.

The latest monarch® burners operate with considerably reduced noise levels, thanks to the specially developed fan unit.

Digital

Digital combustion management means optimal combustion figures, continuously reproducible setpoints, and ease of use.

Weishaupt WM 30-series oil, gas, and dual-fuel burners are equipped as standard with electronic compound regulation and digital combustion management. Modern combustion technologies demand a precise and continually reproducible dosing of fuel and combustion air. This is the only way optimal combustion figures can be ensured over extended periods.

Simple operation

Setting and control of the burner is achieved using a control and display unit. This is linked to the combustion manager via a bus system, enabling the user-friendly setting of the burner.

Flexible communication options

The integrated interface enables all necessary data and functions to be relayed to a master control system. If required, a modem can be installed to allow for remote operation, monitoring, and diagnosis.

Bus communication with external controls and building management

Several bus systems are available via E-Gate or Mod-Gate if data from the burner are to be exchanged with a PLC unit, or if control of the burner is to be integrated into a building management system.

For the control and management levels Weishaupt offers ProGraf NT, a real-time software product that meets any and all requirements.

Technological edge

Digital combustion management makes burner operation simple and reliable.

The most important advantages:

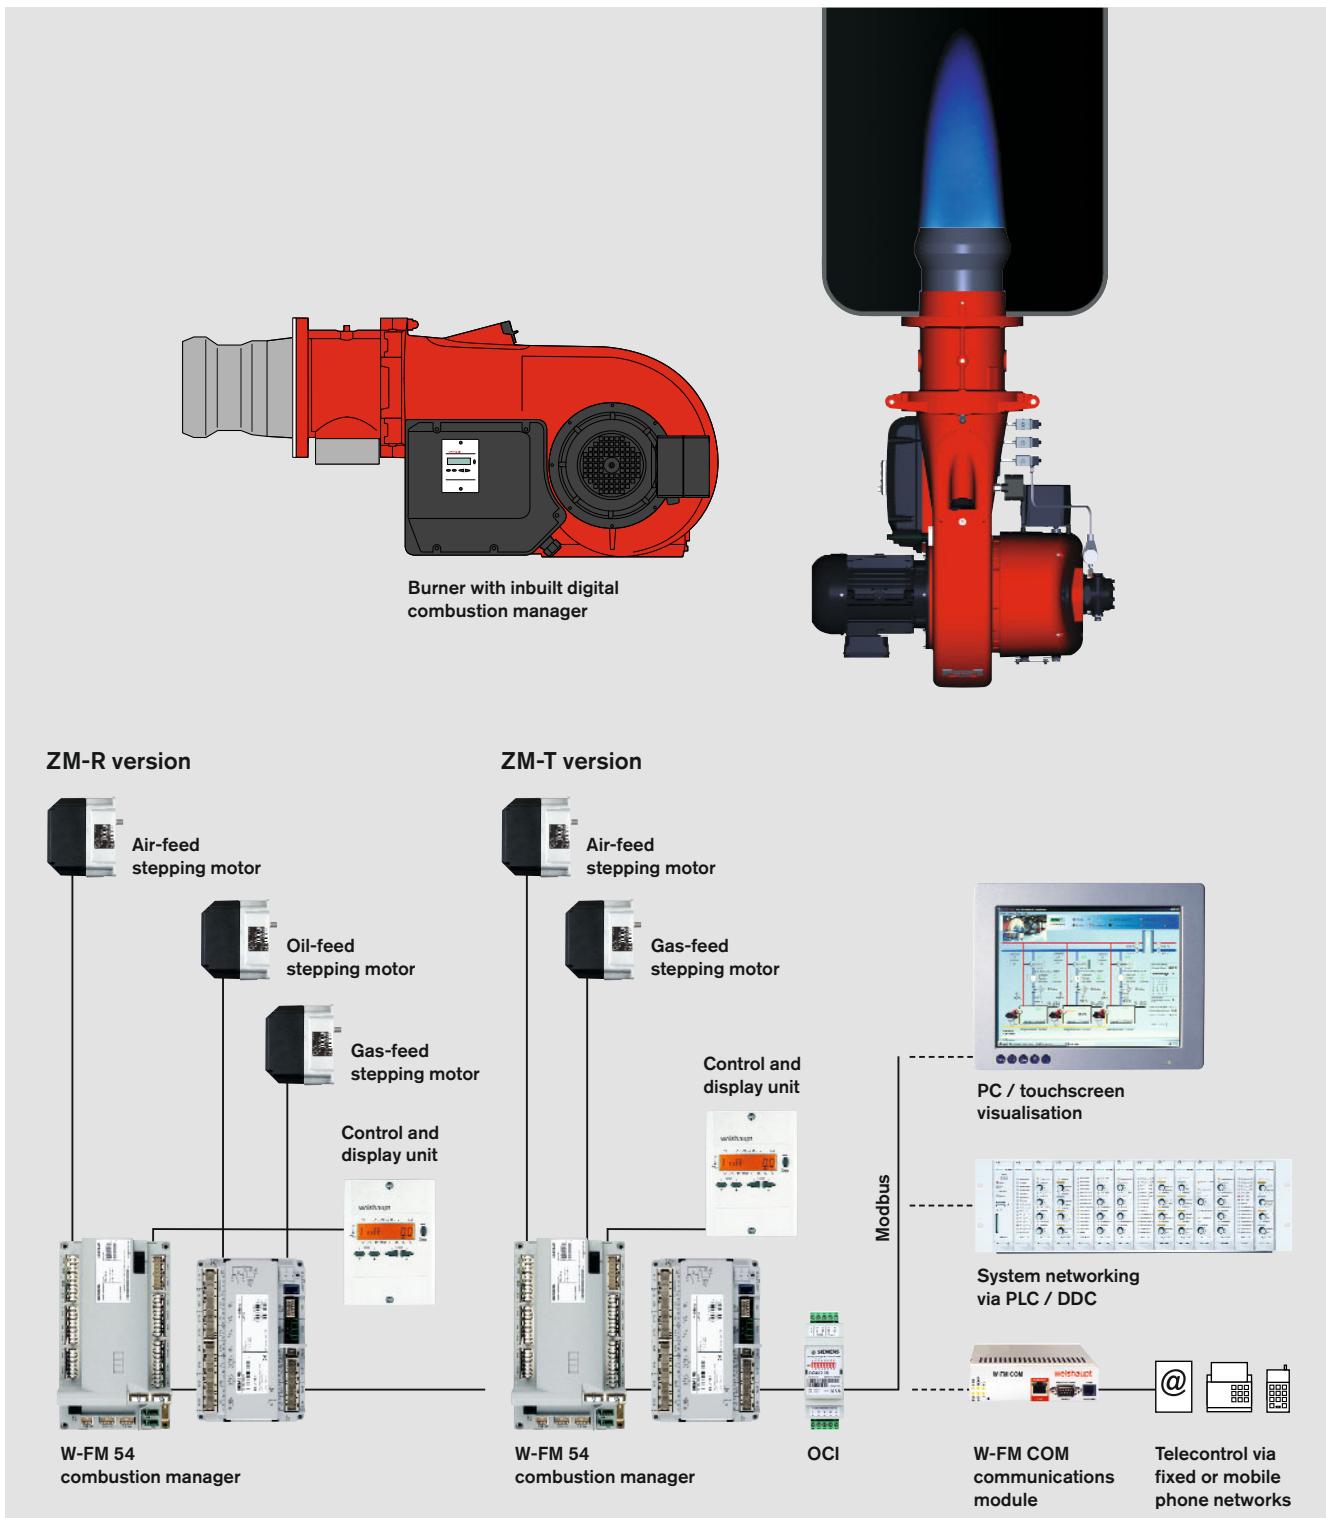

- No additional burner controls are necessary as control is effected by the combustion manager. The only additional requirements are external control and motor fuses.
- Reduced installation expense. Each burner is tested and supplied as a complete unit.
- Commissioning and servicing takes less time. The burner's basic parameters are set at the factory. The combustion manager's menu-driven commissioning program is used to run through the final site-specific adjustments and the combustion emission checks.

²⁾ Gas burners with ionisation probes

Compact and quiet

The latest Weishaupt WM-series monarch® burners are compact, powerful, and quiet. They are writing the next chapter in the 50-year-long success story of the legendary monarch® series.

Futuristic fan technology

From the very earliest stages of development, particular emphasis was placed on a compact, aerodynamic construction and low operational noise levels.

To realise this goal a completely new air inlet and air-damper control were developed. This special housing design with its self-opening air inlet and the new air-damper technology result in increased fan pressure and thus in greater capacity despite the burner's more compact form.

Air damper control provides a high degree of linearity even at the lower end of the burner's operating range and, combined with the sound-attenuated air inlet which is included as standard, ensures quieter operation.

Fast commissioning, simple servicing

All WM 30 burners are delivered with the mixing assembly preset for the required output of the burner. A final adjustment is made using the combustion manager's menu-controlled commissioning program.

All of the burner's components, such as the mixing assembly, air damper, and combustion manager, are readily accessible despite its compact form. This enables maintenance and servicing work to be carried out quickly and easily, aided by the standard hinged flange which provides a perfect servicing position.

Adjustment to suit different combustion chamber conditions can easily be made with the burner in its installed position. The integral sightglass enable ignition and the flame to be observed.

Regulation

The following methods of regulation are available for Weishaupt WM burners:

- Oil: Three-stage (T)
(or two-stage with low-impact start or change-over)
modulating (R)
- Gas: Sliding-two-stage or modulating (ZM), depending on the type of capacity regulation: Within its operating range, the burner's output is matched to the current heat demand.

These multiple control options make the burner universally employable. Both versions ensure a gentle, problem-free start up and high degree of operational reliability.

A number of executions are available to meet differing emission level and operational requirements:

ZM version

Burners with the standard, advanced-design mixing assembly for installations with Class 2 oil and gas-side NO_x emission requirements.

LN version (Low-NO_x)

Compared to burners with the standard mixing assembly, LN-version burners achieve a further reduction in NO_x emissions (Class 3). This is achieved through a more intensive recirculation of the combustion gases in the combustion chamber.

Good emissions depend on combustion chamber geometry, thermal loading and on the combustion system (three-pass or reverse-flame).

3LN version

Ultra-Low-NO_x oil, gas, and dual-fuel burners with multiflam mixing assemblies for installations with extremely low NO_x emission limits (suitable for three-pass and through-pass boilers only). The burners' extremely low NO_x emissions are achieved using a special fuel distribution system. Suitable for light oil, natural gas,

and LPG, 3LN-burners meet NO_x Class 3 requirements.

Fuels

Natural Gas E

Natural Gas LL

LPG B/P

Fuel oil EL (<6 mm²/s at 20 °C) in accordance with DIN 51 603, part 1

The suitability of fuels of differing quality must be confirmed in advance with Weishaupt.

Applications

EN 267 and EN 676-approved Weishaupt WM 20 burners are suitable for:

- Installation on EN 303-compliant heat exchangers
- Hot-water plant
- Steam boilers and high-pressure hot-water plant
- Intermittent and continuous operation
- Installation on air heaters

The combustion air must be free of aggressive substances (halogens, chlorides, fluorides etc.) and impurities (dust, debris, vapours etc.). For many applications, the use of an extraneous air supply is recommended (additional cost).

Permissible ambient conditions

- Ambient temperature during operation -10 to +40 °C (oil/dual-fuel burners)
-15 to +40 °C (gas burners)
- Humidity: max. 80 % relative humidity, no condensation
- Suitable for operation indoors only
- For plant in unheated areas, certain further measures may be required (please enquire).

Use of the burner for other applications or in ambient conditions not detailed above is not permitted without the prior written agreement of Max Weishaupt GmbH. Service intervals will be reduced in accordance with the more extreme operational conditions.

Certification

The burners are tested by an independent body and conform to the following standards and EU directives:

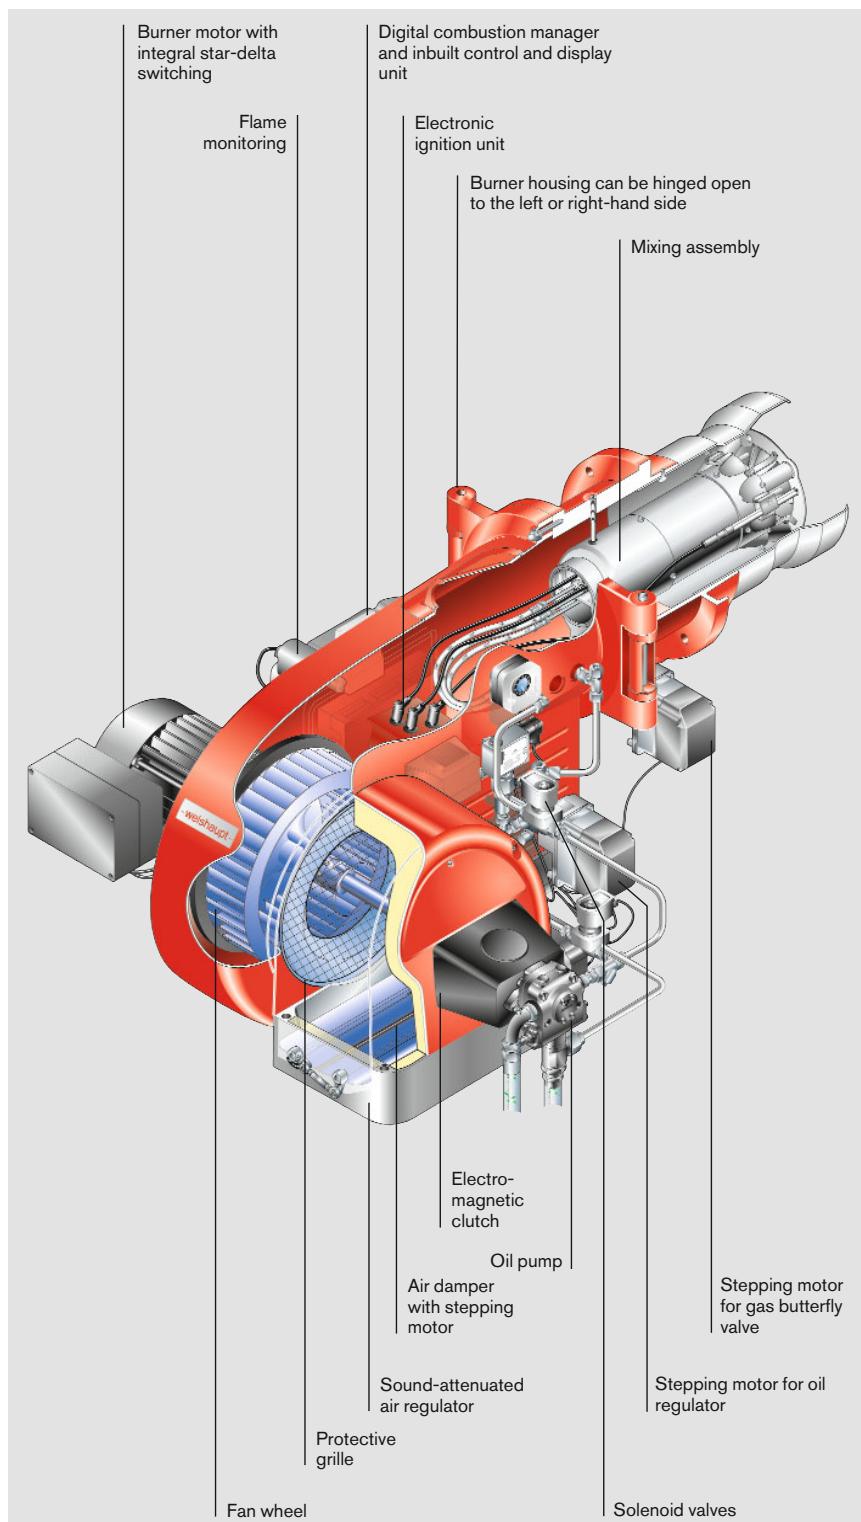

- EN 267 and EN 676
- Machinery Directive, 2006/42/EC
- Electromagnetic Compatibility Directive, 2004/108/EC
- Low Voltage Directive, 2006/95/EC
- Pressure Equipment Directive, 97/23/EC
- The burners carry CE and CE-PIN marks

The most important advantages:

- Easy fuel change-over between gas and oil on dual-fuel burners
- Digital combustion management with electronic compound regulation at all ratings
- Compact construction
- Sound-attenuated air inlet as standard for quieter operation
- Powerful fan with specially developed fan geometry and air-damper control
- All WM 30 burners are delivered with the mixing assembly preset for the required output of the burner
- IP 54 protection as standard
- Electromagnetic clutch included as standard (WM-GL30)
- Easy access to all components, such as the mixing head, air damper and combustion manager
- Reliable operation with three-stage, sliding-two-stage or modulating operation, depending on version and method of capacity regulation
- Computer-controlled function test of each individual burner at the factory
- Burners can be supplied with pre-wired plug connections
- Excellent price / capacity ratio
- Well-established, global service network

Trademark

Weishaupt WM 30 monarch® burners are registered as a trademark throughout Europe.

WM-GL30, version ZM-R

Overview of burner regulation

Model designation

Oil-fired operation

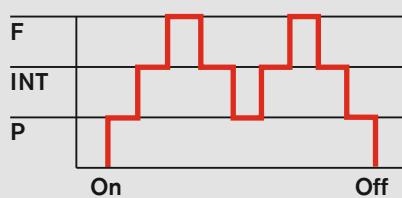

Three-stage operation (T)

- Oil is released during start up by the opening of solenoid valve 1 and the safety solenoid valve
- Full load is reached by the opening of solenoid valves 2 and 3
- Load control is achieved by opening and closing solenoid valves 2 and 3

Modulating operation (R)

- On opening the solenoid valves the correct rate of oil for start up is released
- A digital stepping motor sets the oil regulator to full load
- Capacity regulation between partial and full load through the opening and closing of the oil regulator
- Modulating operation:
 - W-FM 50 or W-FM 54 with a separate capacity regulator
 - W-FM 100 with integral capacity controller
 - W-FM 200
- Alternatively, a regulator can be fitted into a control panel.

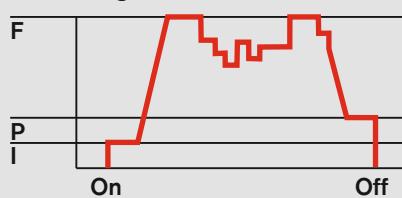

Three-stage

Sliding-two-stage

Modulating

Gas-fired operation

Sliding-two-stage or modulating operation (ZM)

- Stepping motors adjust the capacity between partial load and full load depending on the heat demand
- There is a gradual change between both load points. There are no sudden, large changes in fuel throughput.
- Modulating operation:
 - W-FM 50 or W-FM 54 with a separate capacity regulator
 - W-FM 100 with integral capacity controller
 - W-FM 200
- Alternatively, a regulator can be fitted into a control panel.

F = Full load (nominal load)

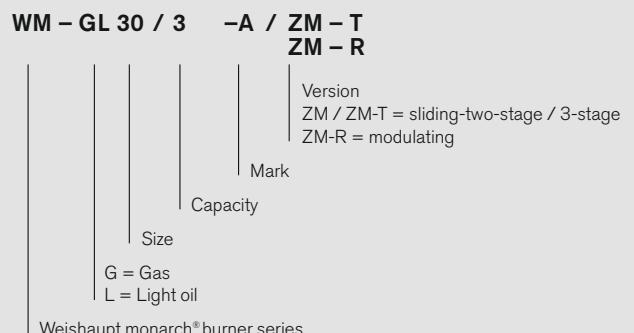

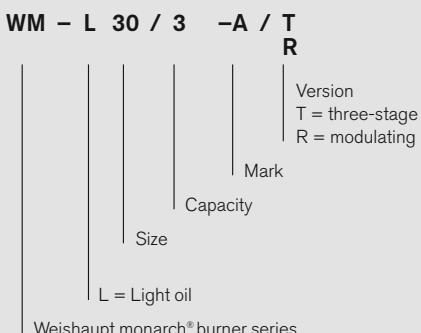

INT = Intermediate load

P = Partial load (min. load)

I = Ignition load

Fuel oil EL: Capacity with combustion head

Closed Open

Turndown: max. 3:1

Capacity graphs certified in accordance with EN 267.

Stated ratings are based on an air temperature of 20 °C and an installation altitude of 500 m above sea level.

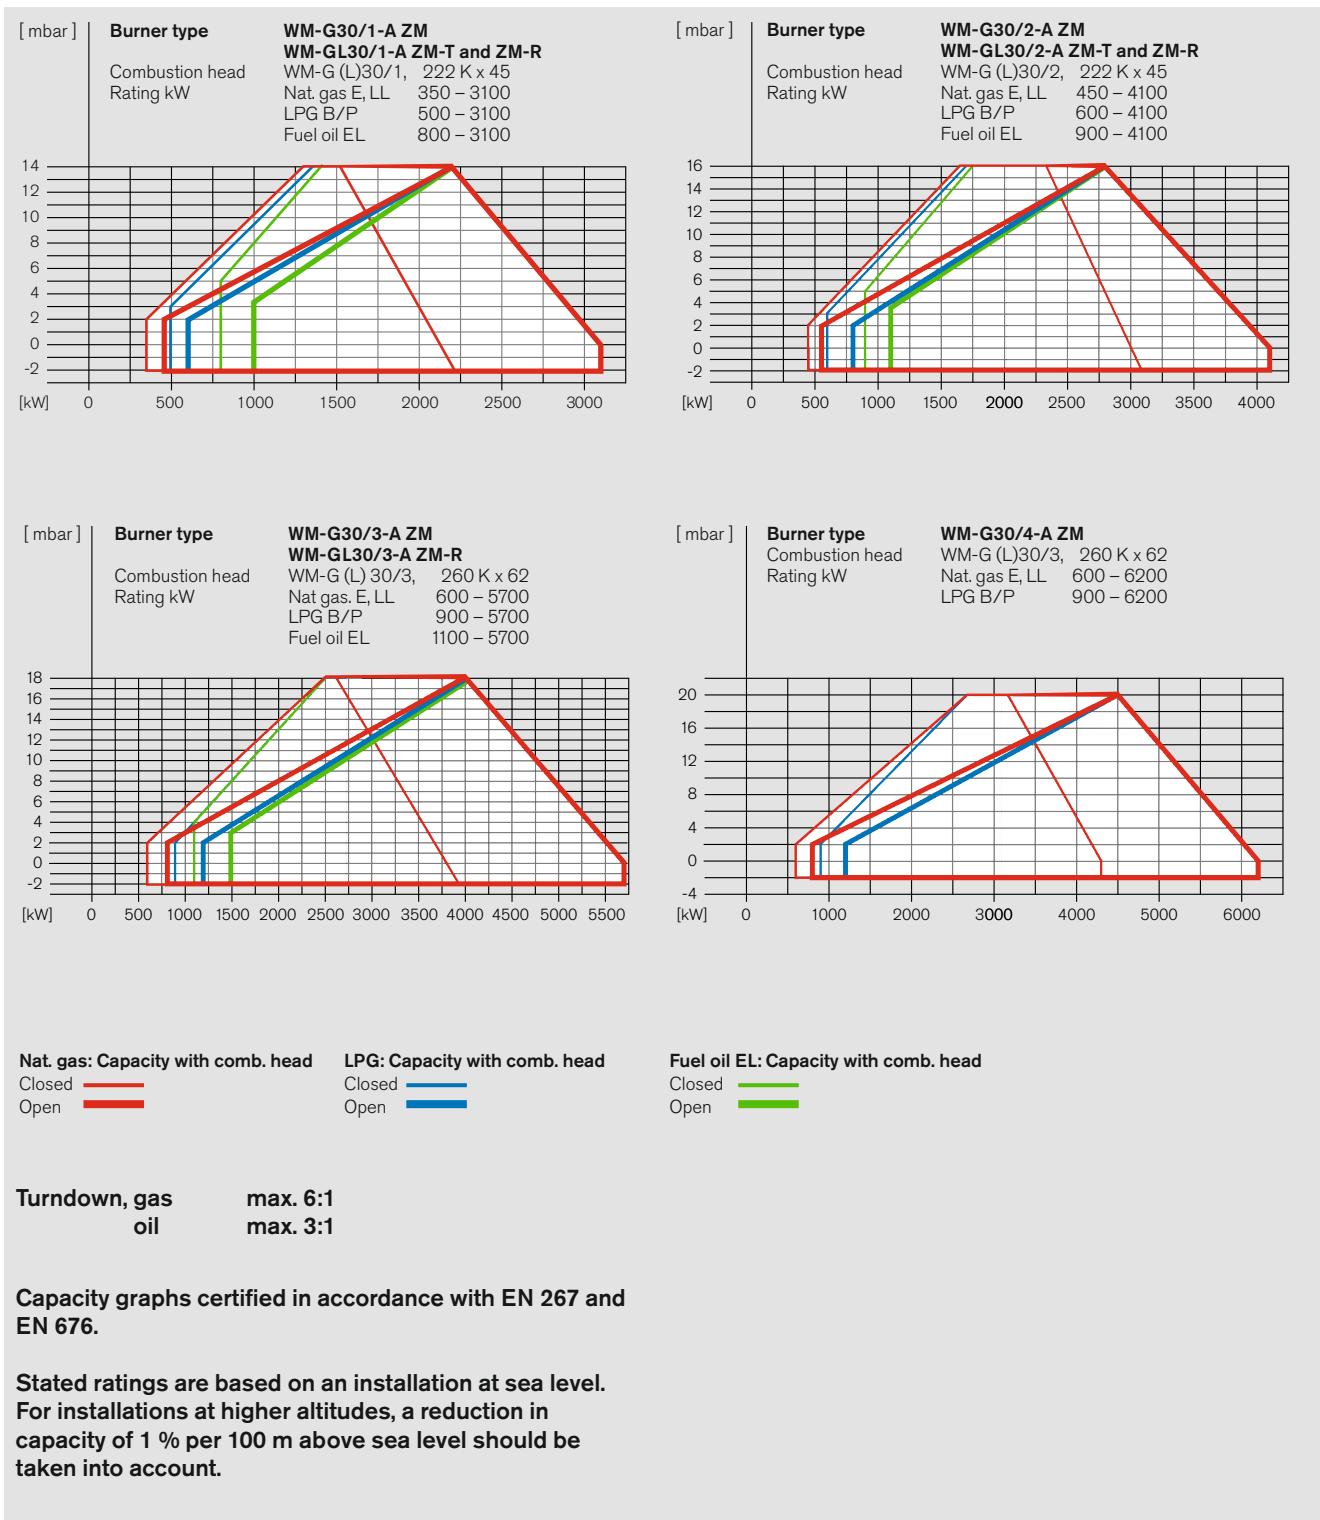

Stated oil throughputs are based on a calorific value of 11.91 kWh/kg for fuel oil EL.

DIN CERTCO certification:

The burners have been type-tested by an independent body (TÜV-Süd) and certified by DIN CERTCO.

Weight	kg	approx 155	approx. 155	approx. 175
Integral pump max. flow rate	Type l/h	TA3 785	TA4 1050	TA5 1410
Oil hoses	DN / Length	20 / 1000	25 / 1300	25 / 1300

¹⁾ The electrical motors are high-efficiency IE2 motors in accordance with Commission Regulation (EC) No. 640/2009

²⁾ The necessary motor protection can be provided either by a motor protection switch (supplied and fitted into a panel by others), or with integral motor overload protection (see special equipment).

Voltages and frequencies:

The burners are equipped as standard for three-phase alternating current, 400 V, 3 ~, 50 Hz. Other voltages and frequencies are available on application.

Standard burner motor:

Insulation Class F, IP 55 protection.

¹⁾ The electrical motors are high-efficiency IE2 motors in accordance with Commission Regulation (EC) No. 640/2009.

²⁾ The necessary motor protection can be provided either by a motor protection switch (supplied and fitted into a panel by others), or with integral motor overload protection (see special equipment).

Voltages and frequencies:

The burners are equipped as standard for three-phase alternating current, 400 V, 3 ~, 50 Hz. Other voltages and frequencies are available on application.

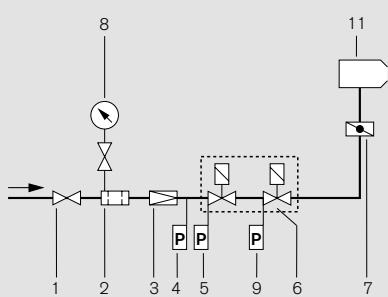

Standard burner motor:

Insulation Class F, IP 55 protection.

Fuel systems

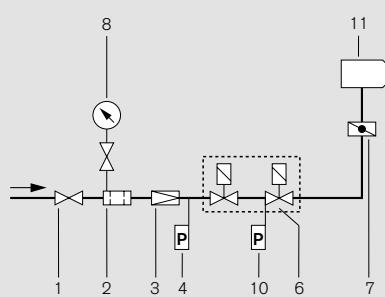

Gas-side fuel system

W-FM 50/100/200

- 1 Ball valve *
- 2 Gas filter *
- 3 Pressure regulator, (LP) or (HP) *
- 4 High gas pressure switch *
- 5 Low gas pressure switch
- 6 Double gas valve assembly
- 7 Gas butterfly valve
- 8 Pressure gauge with push-button valve *
- 9 Valve-proving pressure switch
- 10 Valve-proving/low-gas-pressure switch
- 11 Burner

W-FM 54

* Not included in burner price

Mounting position for high gas pressure switch:
Directly on the regulator of high-pressure trains
After the regulator of screwed low-pressure trains
On the inlet to the gas valve assembly of flanged low-pressure trains

(Cable length approx. 2.5 m)

Layout of the valve train

On boilers with hinged doors, the valve train must be mounted on the opposite side to the boiler-door hinges.

Compensator

To enable a tension free mounting of the valve train, the fitting of a compensator is recommended.

Break points in the valve train

Break points in the valve train should be provided to enable the door of the heat exchanger to be swung open. The main gas line is best separated at the compensator.

Support of the valve train

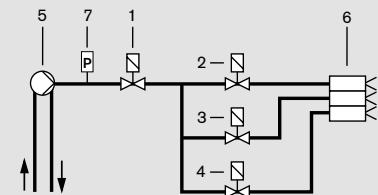

The valve train should be properly supported in accordance with the site conditions. See the Weishaupt accessories list for various valve-train-support components.

Gas meter

A gas meter must be installed to measure gas consumption during commissioning.

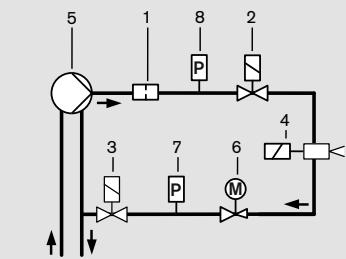

Oil-side fuel system

Version (ZM)-T

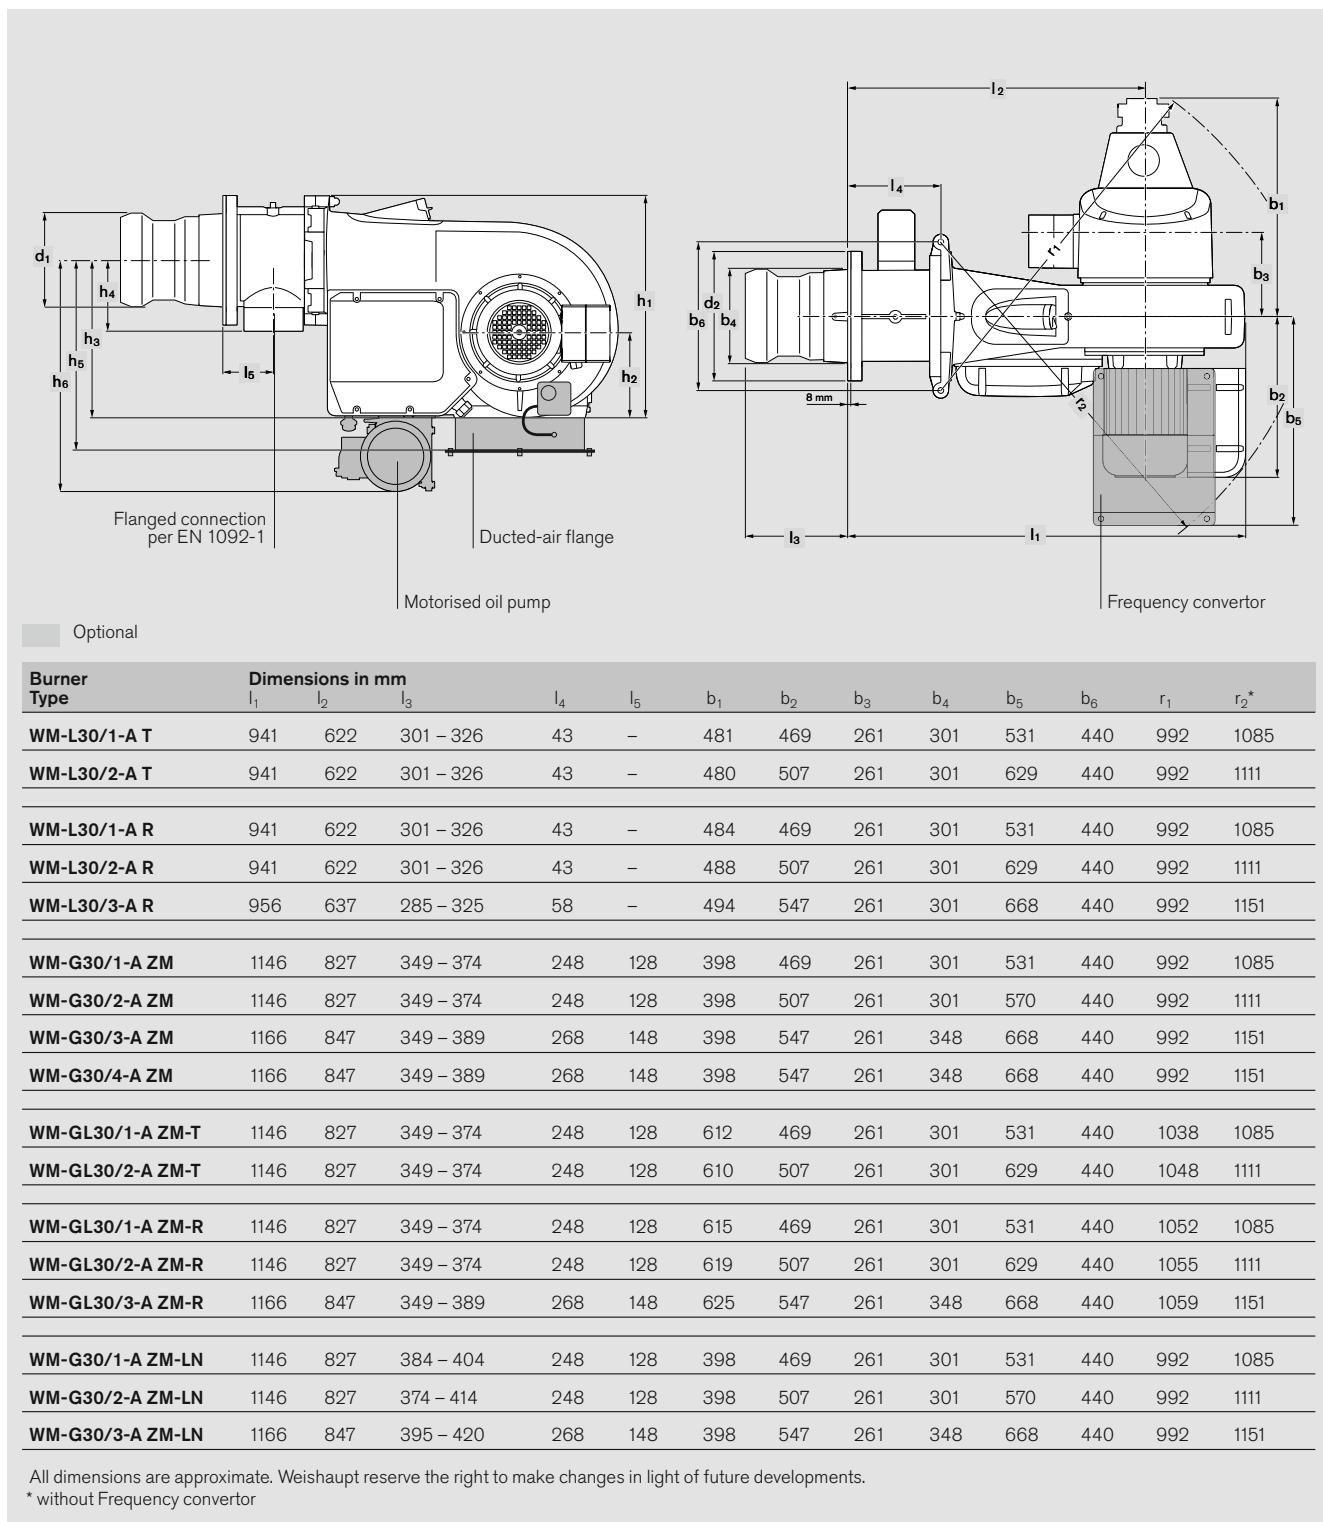

- 1 Safety solenoid valve
- 2 Stage 1 solenoid valve
- 3 Stage 2 solenoid valve
- 4 Stage 3 solenoid valve
- 5 Burner-mounted oil pump
- 6 Nozzle head with 3 oil atomising nozzles
- 7 Pressure switch in supply (optional)

Version (ZM)-R

- 1 Strainer
- 2 Normally closed solenoid valve in supply
- 3 Normally closed solenoid valve in return
- 4 Nozzle head with regulating nozzle
- 5 Burner-mounted oil pump
- 6 Oilregulator
- 7 Pressure switch in return
- 8 Pressure switch in supply (optional)

Dimensions

Underside of ducted-air flange

Mounting-plate drilling dimensions

WM 30/1 and WM 30/2	WM 30/3 and WM 30/4
<p>90°, 45°, d₃, d₄, d₅</p>	<p>60°, 30°, d₃, d₄, d₅</p>

Heat-exchanger preparation

① Flange gasket
② Refractory
③ Aperture

The refractory (2) must not protrude beyond the front edge of the combustion head. It may however be tapered (min. 60°).

Saving fuel, reducing emissions: Patented multiflam® technology

Weishaupt's patented multiflam® technology enables large combustion plant to comply with very low emission limits without the need for expensive additional equipment. This reduction in emissions is achieved through the use of an innovative mixing assembly and fuel distribution.

Weishaupt multiflam® burners have been proving themselves in the field for more than 10 years. They are especially suited to markets with stringent emission limits.

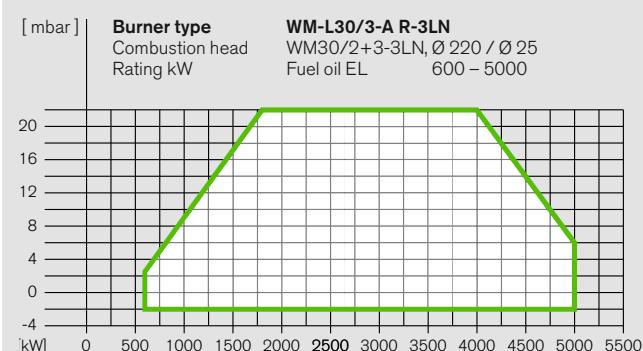

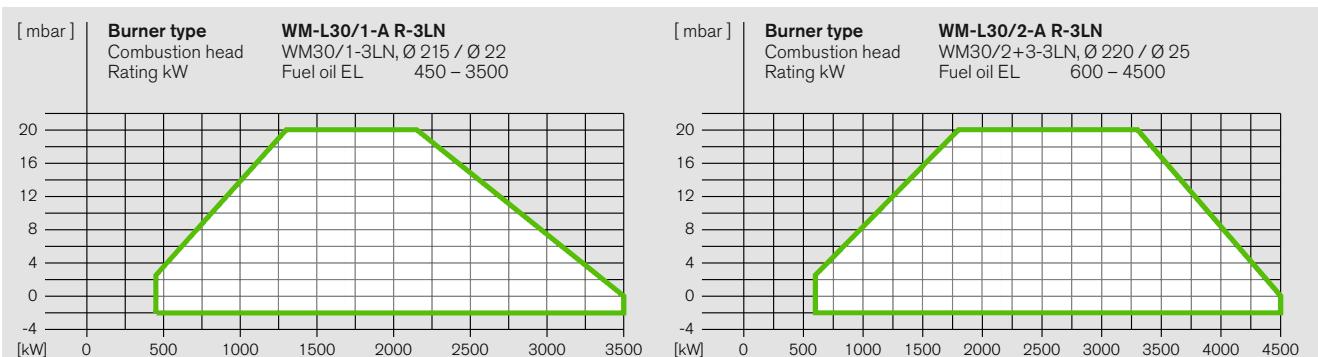

The latest monarch® burners are now bringing this technology to medium-capacity ranges, combining flexibility with extremely low emissions.

Exemplary emissions
3LN, multiflam®-version burners reduce NO_x emissions below the already good levels that can be achieved with a standard mixing assembly. These additional reductions are achieved using a special mixing assembly with fuel distribution.

Good combustion figures also depend on combustion chamber geometry, volumetric loading and boiler design (three-pass type). Certain conditions (including, for example, combustion chamber loading, measurement tolerances, temperature, pressure, humidity etc.) must be observed in order for a guarantee of emission levels to be given.

Burner selection

WM-L30, version 3LN (multiflam[®])

Fuels

Fuel oil EL

Turndown, EL max 5:1

Capacity graphs certified in accordance with EN 267.

Stated ratings are based on an air temperature of 20 °C and an installation altitude of 500 m above sea level.

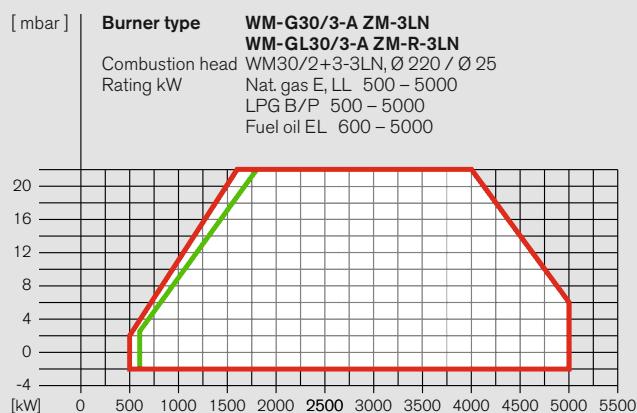

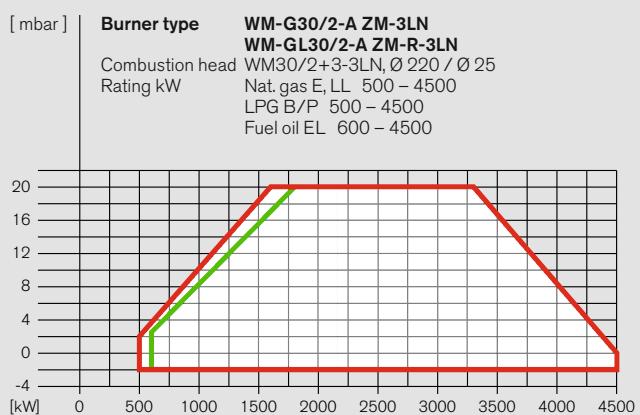

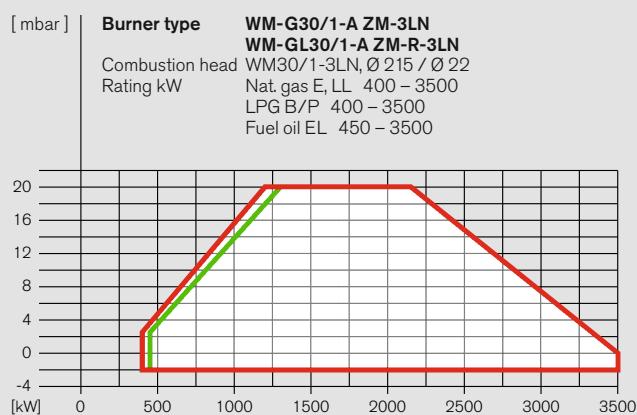

Stated oil throughputs are based on a calorific value of 11.91 kWh/kg for fuel oil EL.

DIN CERTCO certification:

The burners have been type-tested by an independent body (TÜV-Süd) and certified by DIN CERTCO.

Burner selection

WM-G30 and WM-GL30, vers. 3LN (multiflam[®])

Fuels

Nat. gas/LPG ——————
Fuel oil EL ——————

Turndown, Gas max. 9:1
EL max. 5:1

The capacity graphs are certified in accordance with
EN 267 and EN 676.

Stated ratings are based on an installation at sea level.
For installations at higher altitudes, a reduction in
capacity of 1 % per 100 m above sea level should be
taken into account.

The combustion chamber pressure in mbar must be added to the minimum gas pressure determined from the above chart. Minimum gas pressure should not be less than 15 mbar.

* The LPG charts are based on propane, but may also be used for butane.

For low-pressure supplies, EN 88-compliant governors with safety diaphragms are used. the maximum permissible supply pressure into the shut-off valve for low-pressure installations is 300 mbar.

For high-pressure supplies, EN 334-compliant high pressure regulators should be selected from the brochure "Pressure regulators with safety devices for Weishaupt gas and dual-fuel burners". This brochure details high-gas-pressure sets suitable for supply pressures of up to 4 bar.

Refer to the burner's rating plate for the maximum connection pressure.

Technical data

WM 30, version 3LN (multiflam[®])

Oil burners, version R-3LN		WM-L30/1-A	WM-L30/2-A	WM-L30/3-A
Burner motor ¹⁾	Weishaupt type	WM-D 132/170-2/10K0	WM-D 132/210-2/14K0	WM-D 132/210-2/17K0
Nominal rating	kW	10	14	17
Nominal current	A	20	28	34
Motor protection switch ²⁾ or motor prefusing ²⁾	Type (e.g.) A minimum	MS132 - 25 25A gG/T (external)	MS132 - 32 35A gG/T (external)	MS450 - 40 50A gG/T (external)
Speed (50 Hz)	rpm	2900	2850	3320 ³⁾
Combustion manager	Type	W-FM 100	W-FM 100	W-FM 200
Flame monitoring	Type	QRA73	QRA73	QRA73
Air/oil stepping motor Mixing assembly stepping motor	Type Type	SQM45 SQM45	SQM45 SQM48	SQM45 SQM48
NOx Class per EN 267		3	3	3
Weight	kg	approx. 155	approx. 155	approx. 175
Integral pump max. flow rate	Type l/h	TA4 1050	TA5 1410	SMG1629 (motorised) 1500
Oil hoses	DN / Length	25 / 1300	25 / 1300	25 / 1300

¹⁾ The electrical motors are high-efficiency IE2 motors in accordance with Commission Regulation (EC) No. 640/2009.

²⁾ The necessary motor protection can be provided either by a motor protection switch (supplied and fitted into a panel by others), or with integral motor overload protection (see special equipment).

³⁾ Full load at 57 Hz via frequency convertor

Voltages and frequencies:

The burners are equipped as standard for three-phase alternating current, 400 V, 3 ~, 50 Hz. Other voltages and frequencies are available on application.

Standard burner motor:

Insulation Class F, IP 55 protection.

Gas burners, version ZM-3LN		WM-G30/1-A	WM-G30/2-A	WM-G30/3-A
Burner motor ¹⁾	Weishaupt type	WM-D 132/170-2/10K0	WM-D 132/210-2/14K0	WM-D 132/210-2/17K0
Nominal rating	kW	10	14	17
Nominal current	A	20	28	34
Motor protection switch ²⁾ or motor prefusing ²⁾	Type (e.g.) A minimum	MS132 - 25 25A gG/T (external)	MS132 - 32 35A gG/T (external)	MS450 - 40 50A gG/T (external)
Speed (50 Hz)	rpm	2900	2850	3320 ³⁾
Combustion manager	Type	W-FM 100	W-FM 100	W-FM 200
Flame monitoring	Type	ION	ION	ION
Air/gas stepping motor	Type	SQM45	SQM45	SQM45
Mixing assembly stepping motor	Type	SQM45	SQM48	SQM48
NOx Class per EN 267		3	3	3
Weight (excluding DMV and fittings)	kg	approx. 145	approx. 152	approx. 179

Dual-fuel burners, version ZM-R-3LN		WM-GL30/1-A	WM-GL30/2-A	WM-GL30/3-A
Burner motor ¹⁾	Weishaupt type	WM-D 132/170-2/10K0	WM-D 132/210-2/14K0	WM-D 132/210-2/17K0
Nominal rating	kW	10	14	17
Nominal current	A	20	28	34
Motor protection switch ²⁾ or motor prefusing ²⁾	Type (e.g.) A minimum	MS132 - 25 25A gG/T (external)	MS132 - 32 35A gG/T (external)	MS450 - 40 50A gG/T (external)
Speed (50 Hz)	rpm	2900	2850	3320 ³⁾
Combustion manager	Type	W-FM 100	W-FM 100	W-FM 200
Flame monitoring	Type	QRA73	QRA73	QRA73
Air/gas/oil stepping motor	Type	SQM45	SQM45	SQM45
Mixing assembly stepping motor	Type	SQM45	SQM48	SQM48
NOx Class per EN 267 / EN 676		3	3	3
Weight (excluding DMV and fittings)	kg	approx. 170	approx. 177	approx. 190
Weight (excluding DMV and fittings) max. flow rate	type l/h	TA4 1050	TA5 1410	SMG1629 (motorised) 1500
Oil hoses	DN / Length	25 / 1300	25 / 1300	25 / 1300

¹⁾ The electrical motors are high-efficiency IE2 motors in accordance with Commission Regulation (EC) No. 640/2009.

²⁾ The necessary motor protection can be provided either by a motor protection switch (supplied and fitted into a panel by others), or with integral motor overload protection (see special equipment).

³⁾ Full load at 57 Hz via frequency converter

Voltages and frequencies:

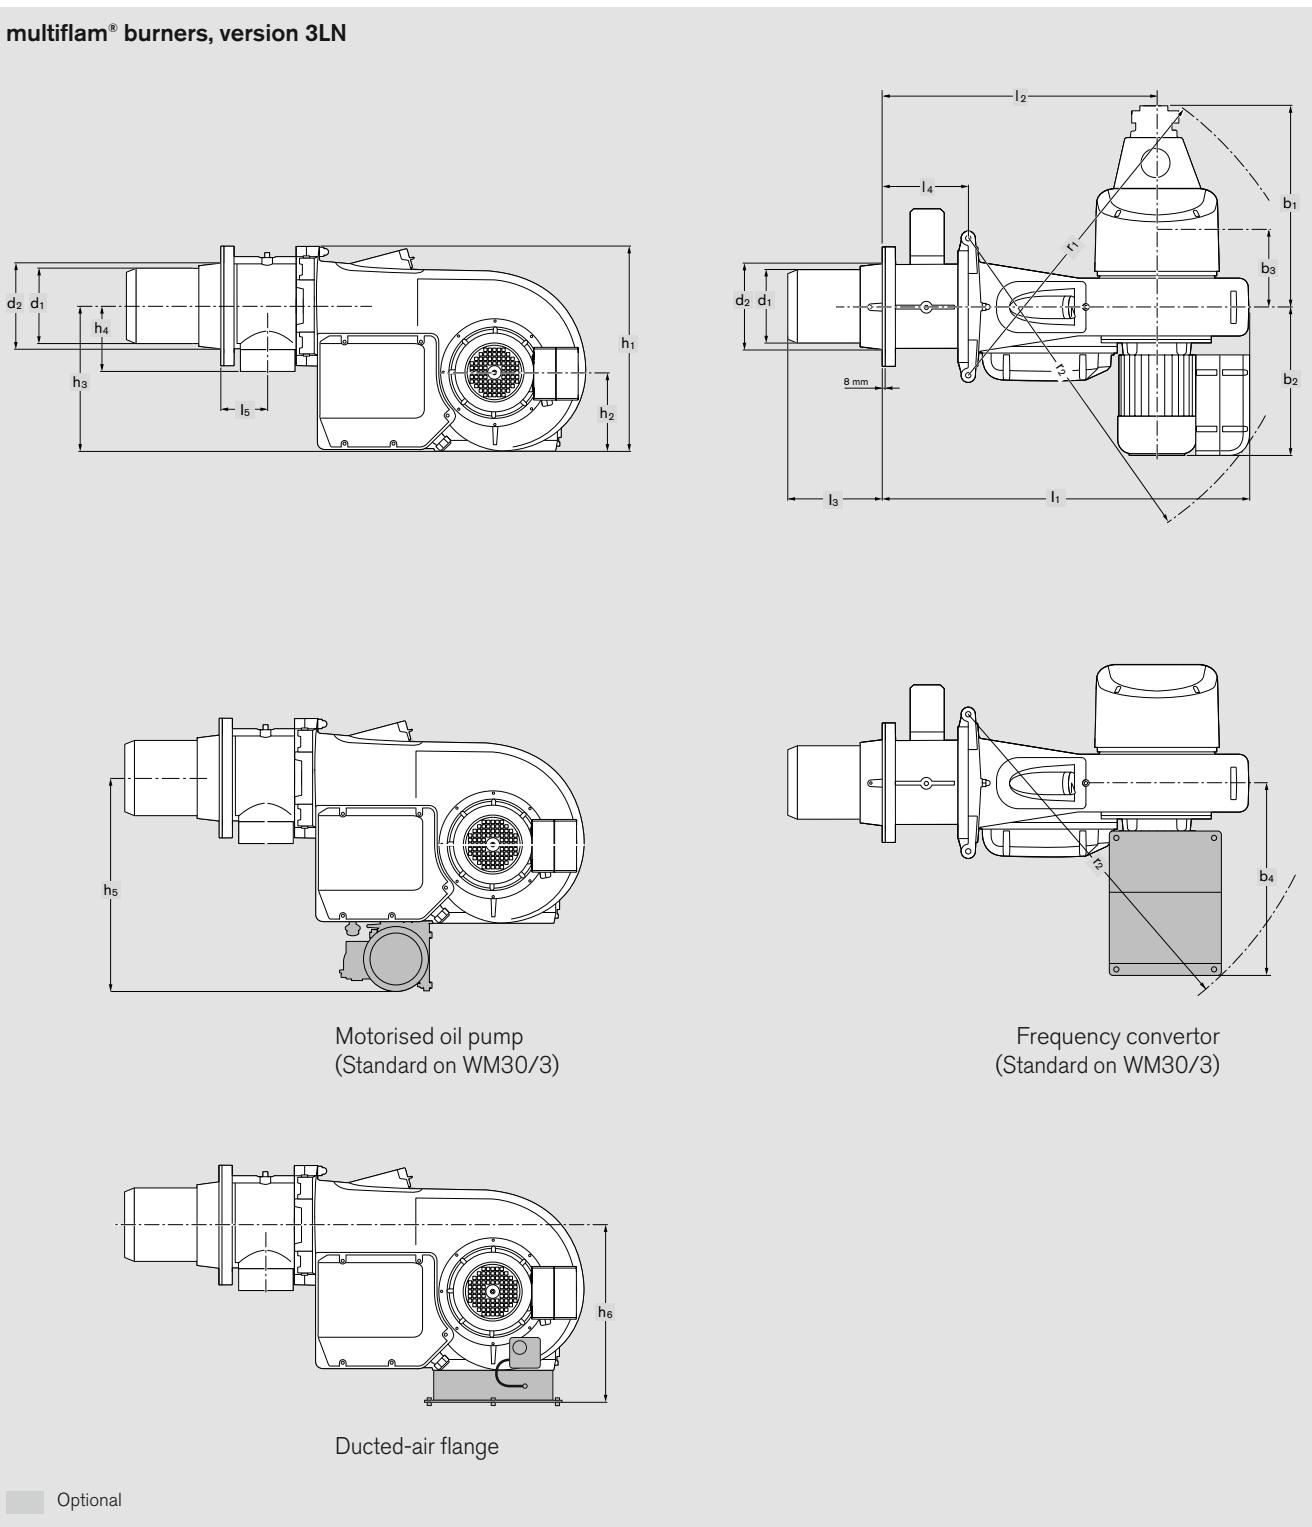

The burners are equipped as standard for three-phase alternating current, 400 V, 3 ~, 50 Hz. Other voltages and frequencies are available on application.

Standard burner motor:

Insulation Class F, IP 55 protection.

All dimensions are approximate.

Weishaupt reserve the right to make changes in light of future developments.

Mounting-plate drilling dimensions

Heat-exchanger preparation

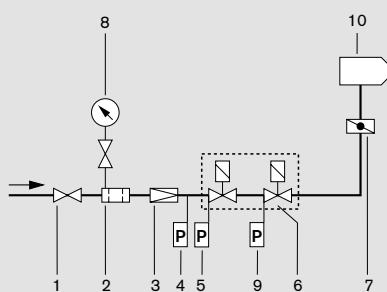

- ① Flange gasket
- ② Refractory
- ③ Aperture

The leading edge of the combustion head must protrude approx. 50 mm beyond the refractory (2). The refractory may be tapered (min. 60°).

Fuel systems

Gas fuel system

W-FM 100/200

- 1 Ball valve *
- 2 Gas filter *
- 3 Pressure regulator, (LP) or (HP) *
- 4 High-gas-pressure switch *
- 5 Low-gas-pressure switch
- 6 Double gas valve assembly
- 7 Gas butterfly valve
- 8 Pressure gauge with push-button valve *
- 9 Valve-proving pressure switch
- 10 Burner

* Not included in burner price

Mounting position for high gas pressure switch:
Directly on the regulator of high-pressure trains
After the regulator of screwed low-pressure trains
On the inlet to the gas valve assembly of flanged low-pressure trains
(Cable length approx. 2.5 m)

Layout of the valve train

On boilers with hinged doors, the valve train must be mounted on the opposite side to the boiler-door hinges.

Compensator

To enable a tension free mounting of the valve train, the fitting of a compensator is recommended.

Break points in the valve train

Break points in the valve train should be provided to enable the door of the heat exchanger to be swung open. The main gas line is best separated at the compensator.

Support of the valve train

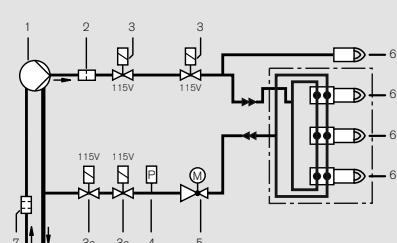

The valve train should be properly supported in accordance with the site conditions. See the Weishaupt accessories list for various valve-train-support components.

Gas meter

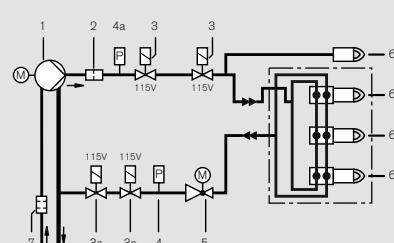

A gas meter must be installed to measure gas consumption during commissioning.

Oil fuel system

WM30/1 and WM30/2

WM30/3
with motorised pump, type SMG 1629

- 1 Oil pump
- 2 Strainer
- 3 Normally closed oil solenoid valve (115 V, switched in series with 3a)
- 3a Normally closed oil solenoid valve (115 V, switched in series with 3, fitted against the direction of flow)
- 4 Oil-pressure switch in return
- 4a Oil-pressure switch in supply
- 5 Oil regulator
- 6 Nozzle assembly with shut-off device
- 7 External oil filter. ①

① Not included in burner price.

That's no façade. Headquartered in the southern German town of Schwendi, and with numerous offices across the world, Weishaupt has been a leading player in the heating and combustion technology industries for years. That's reliability.

Weishaupt is reliability.
The family-owned business from Schwendi in southern Germany was founded by Max Weishaupt in 1932. It is a global player, with offices in 60 countries across the world, and is a market leader for burners, heating and

condensing boiler systems, solar technology, heat pumps, and building management systems.

The pioneering Max Weishaupt endowed his business with the core values of trust, quality, customer service, innovation, and experience.

That, summed up in a single word, is reliability.

And that is something for which Weishaupt stands to this day.

That's no Utopia. Weishaupt's constant research and development programme ensures ever cleaner and more economical burners and heating systems. That's reliability.

Test beds at the Weishaupt Research & Development Centre

Making advances

Weishaupt has long recognised the theme of our times and is continually researching into ever more effective and environmentally friendly burners and heating systems. So Weishaupt is not only contributing considerably to the reduction of unnecessary energy costs, but is also taking an active part in protecting the environment.

In-house production

Not only research and development takes place at Weishaupt. Burner and heating system production is also deeply rooted at our sites in Germany and Switzerland. That enables the real-time, seamless monitoring and control of all the products produced by Weishaupt.

We're right where you need us

The security of a comprehensive service network

Weishaupt equipment is available from good HVAC specialists, with whom Weishaupt works in close partnership. To support the specialists, Weishaupt maintains a large sales and service network, ensuring equipment, spares and service are always available.

Weishaupt are there when you need them. The service department is available to Weishaupt customers around the clock, 365 days a year. A Weishaupt office near you is standing by to answer all your heating questions.
